

High-powered workflow. High-volume productivity.

QS/1's PrimeCare has detailed facility management functions so high-volume pharmacies can customize the software to suit their operations. It's ideal for pharmacies serving LTC, mental health, assisted living, board and care, or correctional facilities. QS/1 has software, services and support to help your high-volume pharmacy operate safely and efficiently for greater profitability.

Order Entry and Processing

QS/1's easy-to-learn Windows-based GUI design supports mouse and keyboard navigation. Desktop menus and toolbars provide fast access to tasks and data. Process using demand fill, cycle fill, or unit-dose exchange and manage dispensing and billing independently. Only QS/1 has productivity-enhancing InstantFill™ to automatically move refills through workflow with minimal intervention.

Accounts Receivable and Billing

PrimeCare's facility-billing matrix ties facility-billing rules to patients. Post charges, credits and payments to accounts and receive and process third-party 835 payment files. Print revenue reports, third-party aging reports, account statements, invoices and other reports. QS/1's automatic rebill function streamlines third party and accounts receivable. Credit and reverse charges and recalculate and resubmit revised charges when a patient's billing status changes. Manage patients' hospice drug list and billing to multiple third parties. For Part B billing, PrimeCare integrates with QS/1's SystemOne[®] for HME.

Security

Securely manage technician, pharmacist and employee system access with PrimeCare's security features. Ensure safety with a HIPAA tracking log, as well as the ability to track and report user access to patient records.

Facility Connectivity

QS/1's WebConnect™ is an easy-to-use, secure, Internet-based service that enhances pharmacy-facility connectivity. Authorized facility personnel can access, search, edit and print facility data, as well as submit new or refill orders in real time and verify refill status. In the pharmacy, WebConnect saves time, increases efficiency and enhances customer service. Pharmacies can also create patient-specific price quotes.

Comprehensive Clinical Management

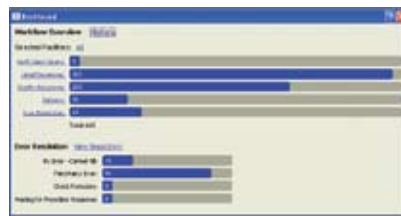

PrimeCare screens for drug-drug interactions, duplicate therapy, drug-disease contraindications, drug allergies, geriatric precautions, drug-food precautions and adult min/max dose checking. Document and bill clinical interventions for MTM, track outcomes using SOAP notes and keep detailed patient charts for reporting and billing.

Reports and Medical Records

PrimeCare includes file lists, prescription logs, DEA audits and more. Also included are POF, MAR, TAR and psych-monitoring forms and reports, as well as laser formats. Management reports include sales analysis, price modeling and revenue reports. Create your own lists and reports using PrimeCare's custom report features. QS/1's optional Data Export module can export data to off-the-shelf database and spreadsheet products.

Industry-Standard Interfaces

Interface with electronic health records (EHR) and electronic medical record systems (EMR). Easily connect to robotic counting, dispensing, and packaging systems; ADT and billing systems; and eMAR products using QS/1's real-time and batch interfaces, as well as industry standard HL7 interfaces. PrimeCare is compatible with NCPDP SCRIPT.

Workflow Management

PrimeCare breaks dispensing into separate workstations, including one for error resolution. Create a step-by-step workflow that includes dedicated workstations for order entry, Q/A and barcode tote checking to enhance productivity and safety.
