DeliveryTrack®

Device Options

Starting in version 5.0, DeliveryTrack supports both the Windows Mobile and Android Platforms. Windows Mobile is not supported past Version 5.5.1.

Android - Minimum Device Requirements

We have rigorously tested numerous devices and compiled a set of minimum requirements for devices that will best operate DeliveryTrack Android. Given the minimum requirements, the following devices were used in our testing and are strong candidates for DeliveryTrack Android:

- Samsung S4
- Samsung S5
- Nexus 6
- Motorola Moto X (Second Generation)
- Android Droid Turbo
- HTC One

If you choose to select devices outside the set of recommended options, please ensure your devices meet the minimum set of requirements found below.

Operating System	Android Version 4.4 (KitKat) or above	Required
Camera	Self-Focusing Camera	Required
	At least 5 MP rear facing	Required
	LED Backlight	Recommended
Battery	Battery capacity of at least 2300 mAh	Recommended
	Snapdragon 801 or 805 processors	Recommended
Connectivity	Wi-Fi in pharmacy	Recommended
	Cell on 4LTE	Recommended
Accessories	Protective Cover *	Recommended
	Vehicle Charger	Recommended

* Protective covers offer a high degree of protection and can supplement battery life: www.otterbox.com, www.lifeproof.com, www.mophie.com.

Use of tablets is also supported, but please note not all tablets come with data plans, and battery life is often compromised due to the larger screen. Tablets also often do not have backlight, which is very useful for scanning in poorly lit environments.

Windows Mobile – Minimum Device requirements

Windows mobile 6.5 and above is supported on a limited set of ruggedized devices. Please see supported devices document for full details. **Please note that this platform will no longer be supported after Version 5.5.**

Hybrid Environment

For those pharmacies currently using Windows Mobile devices, Integra will continue to support those devices.

For customers wishing to incorporate a few Android devices to their existing fleet, DeliveryTrack supports a hybrid environment of Windows Mobile devices and Android devices on the same server.

If you have questions, or would like assistance selecting the device best suited for your pharmacy, please contact Integra Sales at sales@integragroup.com or 866-257-4279.

2G Phase Out Notice

The 2G Network currently used for connectivity on some of the older Windows Mobile Rugged Devices is to be sunset per the published schedule below:

- AT& T – January 2017
- Verizon – 2021
- Sprint has not published

With this shutdown in sight, Integra strongly recommends device replacement onto the newer 3G or 4LTE networks before the 2G networks are turned off.
