# DLT DeliveryTrack®

HOW DELIVERYTRACK WORKS

DeliveryTrack is an innovative delivery solution that fully integrates with DocuTrack to manage all aspects of pharmacy delivery. DeliveryTrack enables pharmacies to give immediate delivery verification or en route status to facilities.

The diagram below gives you a basic view of the DeliveryTrack process. Turn-by-turn navigation, accurate GPS vehicle tracking, and verification checks ensure that the correct items are being delivered and that drivers are at the correct locations. This information is then synchronized back to the pharmacy server where dispatch can access it.

DeliveryTrack®
Delivery Process Validation

Validation that all packages for a route are collected — 1

Validation that incorrect packages are not taken by mistake — 2

Verification that the driver is at the correct stop — 3

Verification that all correct packages for the stop are delivered — 4

Proof of delivery via electronic signature — 5

Automated return of the manifest back to the pharmacy — 6

Update of delivery status on the DeliveryTrack server at the pharmacy — 7
