

Point-of-Sale

Boost profitability and patient satisfaction.

Our Point-of-Sale (POS) system integrates seamlessly with our Pharmacy Management Systems to provide a storewide retail management solution. It works with our pharmacy systems to tighten inventory management, eliminate redundancies, and drive retail profits.

Integrated Retail Management

POS offers comprehensive retail management for one store or centralizes retail operations for multiple locations. Use POS to update item pricing, order and receive inventory electronically from your wholesaler, integrate with pharmacy will call, and manage a customer loyalty program. POS lets you establish automatic reorder levels to reduce inventory investment and maintain proper levels. POS also helps you identify fast- or slow-moving inventory and high-volume trends to capitalize on supplier discounts.

Greater Efficiency

POS integrates with our pharmacy management systems so retail and pharmacy share databases to streamline operations. Utilize electronic signature capture via wireless tablets for in-store and drive-thru customers. Remote Checkout® provides a wireless checkout while up-to-date pricing and barcode scanning reduce errors and unauthorized discounts. Our POS system is SIGIS certified, IIAS compliant, adjudicates FSA/HRA-eligible items, and makes managing a customer loyalty or gift-card program easy.

Easy to Learn, Easy to Use

POS has an easy-to-learn design that supports time-saving touchscreen technology. Retail staff can choose mouse, touchscreen, or keyboard navigation to access user-friendly screens with large buttons and eye-friendly colors.

Comprehensive Training and Support

We offer toll-free support and online training guides and tutorials as well as step-by-step wizards that provide help for infrequently performed tasks.

- Fully integrates with our pharmacy management systems for storewide management
- Compliant with IRS regulations for IIAS and FSA cards
- Improves inventory management with automatic reordering, purchase orders, and purchase-order acknowledgments
- Uses electronic signature capture to track prescriptions checked out through the register and alerts cashiers to additional customer prescriptions waiting in will call
- Provides multiple payment options, including credit and debit cards and in-store charge accounts
- Easily manages store loyalty and gift-card programs
- Reduces store loss with check verification, multi-level security, and limits on individual check cashing, voids, and refunds

Point-of-Sale

Front-End Management

- Automatically updates pharmacy workflow by removing prescriptions from will call*
- Scans prescriptions during checkout to alert cashier to other prescriptions for pickup
- Supports two-drawer operation
- Training mode ensures data isn't retained or collected while training employees

Customer Checkout

- Provides FSA/HRA adjudication with SIGIS-certification and IIAS-compliance
- Makes customer checkout fast, easy, and flexible with touchscreen or keyboard controls
- Validates and processes payments via credit/debit cards, in-store charge accounts, and checks
- Provides a cash-back option on debit transactions
- Utilizes a single electronic signature for PSE log, HIPAA, and HME documents, as well as credit and FSA cards at the POS register or with a wireless tablet*
- Offers wireless signature capture for drive-thru customers*

Flexible and Secure

- Helps eliminate cashier errors and unauthorized discounts
- Controls access with flexible security levels
- Employee time-clock function tracks employee hours
- Prints deposit and customer information on the backs of checks
- Allows limits on check cashing, voids, and refunds to protect against loss
- Retains an electronic log for the pickup of controlled substance prescriptions (Class 2, 3, 4, or 5 drugs)

Inventory Management

- Provides Quick Add feature to easily add new items
- Enables you to establish automatic reordering levels and check in inventory
- Allows electronic ordering and receiving from wholesaler, one click and inventory is automatically updated when order arrives
- Allows you to track shrinkage by comparing the on-hand quantity in the system with actual inventory
- Generates purchase orders and purchase-order acknowledgements

Centralized Front-End Operations

- Generates centralized reports, including credit-card analysis, department sales and drawer balancing
- Monitors and manages a central customer loyalty program
- Centrally manages gift cards so customers can purchase from any of your store locations

Item Pricing

- Prices by item or group using a variety of pricing formulas
- Receives electronic price updates directly from your wholesaler through ASAP-standard 832 via Internet connection
- Eliminates individual price item stickers

Manage Store Promotions

- Manages customer loyalty programs
- Tracks sales to identify seasonal trends
- Measures the effectiveness of in-store promotions
- Manages your own gift-card program

Easy Connectivity

- Exports data in a variety of file formats for analysis and reports*
- Communicates with multiple wireless devices for enhanced customer service and convenience*

* Requires additional hardware, software or services.
