

WebConnect®

Increase productivity and communications between your pharmacy and the LTC facilities you serve.

Provide a safe and secure connection between your PrimeCare® Pharmacy Management System and LTC facilities with Integra's WebConnect. Enabling LTC facilities to submit refill orders that flow directly into the pharmacy's filling queue, reduces errors, paperwork, and staffing needs for both your pharmacy and facility customers.

Streamline Communications

WebConnect helps decrease interruptions caused by faxed requests and phone calls for refill orders and status updates. Fewer interruptions allow you to provide superior customer service and offers real-time digital access to your facility's data.

The easy-to-use application allows authorized LTC facility employees to access, search, edit, and print patient and medication information quickly and easily. Facility staff can submit refills, view the patient billing matrix, and check on the status of deliveries from anywhere in the facility. WebConnect works from a workstation, laptop, or tablet with internet access.

Facility Access

- Add, update, or view new patients
- Search active medication profiles for patients
- Order refill medications
- View patient billing matrix
- Print patient education monographs
- Check delivery status
- Electronically receive deliveries
- Check for drug interactions
- View geriatric precautions
- Calculate daily medication costs
- View and print MARs

Facility Reporting

- Display and print refills-submitted report
- Display and print report of daily facility deliveries
- Generate destruction reports with pre-populated information based on prescription data
- Access patient reports, such as Active Medication, Medication Discharge, Leave of Absence Sheet, Medication Reconciliation Sheet, and monthly MARs

Safe and Secure

- Control access with a secure facility-specific login and pass code
- Share patient information only with authorized facility staff
- Utilize wireless barcode scanning for refill orders and delivery reconciliation

- Enable facilities to submit refill medication orders that flow directly into the pharmacy filling queue
- Share data between the pharmacy and facility
- Eliminate time-consuming faxed requests and phone calls with online refill orders and refill status verification
- Improve customer service by providing access to facility-specific patient data from a workstation or mobile device
- Provide facility staff the ability to view the patient billing matrix
- Generate destruction reports with pre-populated prescription information
- Improve patient safety with electronic refill orders
- Take advantage of wireless barcode scanning for safety and efficiency
- Allow 24/7 access to help, online tutorials, and training materials
