

# DocuTrack Active Directory

The **DocuTrack Active Directory Module** allows you to simplify DocuTrack logon for your staff as well as reduce IT administration tasks. This is accomplished by fully integrating your DocuTrack server with your Windows Active Directory. No Active Directory Schema changes are made by DocuTrack and the integration is controlled through simple group mapping. This centralizes user management and helps your IT staff reduce the complexity of complying with HIPAA and Sarbanes-Oxley regulations.

## KEY BENEFITS

**Reducing security risks** is accomplished by integrating DocuTrack's logon process with Microsoft's Active Directory services. This integration allows your administrators to enforce the same secure password requirements whether the user is logging into the computer workstation or DocuTrack. This also enables Single Sign-On which allows your users to access DocuTrack resources without the need to log on a second time. Once the user logs onto the computer those same security credentials are used to grant access to DocuTrack resources and features.

**Simplified user management** is accomplished by only requiring your DocuTrack administrator to map DocuTrack groups to Active Directory groups to grant access to DocuTrack. They do not need to make individual user accounts for each user and replicate the work they already accomplished with Active Directory. Once the groups have been mapped, your users instantly have access to DocuTrack with their Active Directory group granting specific DocuTrack privileges.

**Active Directory Authentication** is provided with DocuTrack's Active Directory Module. When a user accesses the pharmacy's network from home, the home computer is typically not a member of the pharmacy's Active Directory. For computers not on your pharmacy's domain, the user will be prompted to input their domain user name and password. That user name and password are then validated with your domain server so your users do not have to manage multiple user names and passwords.

## Features

- Reduce security risks
- Single security schema
- Simplified user accounting

## Benefits

- Single sign-on
- One security model
- Reduces IT oversight

## Security Models

- LDAP
- Active Directory

## Other Modules

- Assistant
- Barcoding
- eRx
- Real-Time Viewer
- Direct Print
