DocuTrack
Assistant

DocuTrack Assistant is a customizable add-on that instantly loads associated orders during the pharmacist verification process and significantly reduces overall processing time with fewer keystrokes and substantially fewer data entry steps.
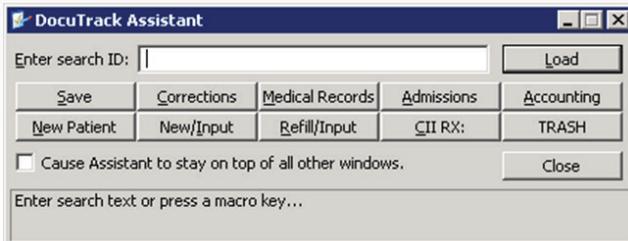

KEY BENEFITS

DocuTrack Assistant is utilized during the pharmacist review process in conjunction with a hand scanner. This provides immediate access to all original orders.

At a workstation, the pharmacist scans a barcoded prescription label. Documents associated to that prescription immediately load into DocuTrack so pharmacists no longer have to type in prescription information to pull up the original order. They simply scan, view, verify, and complete. This is especially useful for pharmacies needing to verify dispensed prescriptions with the faxed order before toting.

DocuTrack Assistant not only enhances the pharmacist review process, but enables all users to save valuable data entry, look-up, and processing time. There are ten (10) customizable macro buttons available that allow users to move more efficiently through each step of processing.

Each of these buttons can be designed to complete a series of document processing steps in one single click. A document could be set to be sent directly to Admissions, Medical Records, or Accounting, or an incoming order could be routed as a refill, CII, or correction. The example below is a macro created for use during data entry.

General Features

- Instant document load
- Auto-population of data
- Complete multiple steps with one click

Key Benefits

- Save time
- Process more orders
- Fewer keystrokes

Other Modules

- Active Directory
- Barcoding
- eRx
- Real-Time Viewer
- Direct Print

Pharmacists scan barcoded prescription label to instantly pull up original orders.
