# Improve Facility-to-Pharmacy Communication

## Facility Portal

WebConnect improves facility-to-pharmacy communication. Staff can quickly access clinical information and up-to-date care data using a device with internet access.

*"WebConnect allows us to offer services that customers are not able to get elsewhere."*

Stephanie Kirkland, R.Ph., Senior Director,  
ElderCare Pharmacy

### Tie it All Together

Facilities can connect with a pharmacy using the PrimeCare Pharmacy Management System, allowing staff to submit refill requests and much more.

- Add, update, or view new patient information.
- Search for and access patient active medication profiles.
- Access clinical information online.

### Increased Productivity

Both pharmacies and facilities benefit from time savings that equate to better patient care.

- Decrease pharmacy interruptions caused by fax and phone requests for refills and status updates.
- Access, search, edit, and print patient and medication information quickly and easily.
- Allow facilities to view the prescription delivery status in pharmacy workflow.

### Report Capabilities

WebConnect offers access to the reports facilities need. Antibiotic, Psychotropic, and Anti-Psychotic Reports provide vital patient information. Facilities can also print POF, MAR, and Psychotropic forms.
